

DESCRIPTION

838 WebTape has a facing designed to hold both solvent and water based coatings. Web tape can be used over a variety of roofing substrates including: metal, EPDM, PVC, TPO, CSPE and asphalt.

USES

WebTape can be used on metal to seal roof joints and gutters. It can also be used to

seal tears and holes in membranes, flashings and skylights. WebTape can stick to itself and it can be cut or folded to fit around objects. Surfaces must be clean and dry before application. Use PlyPrime before installing WebTape on membranes to promote adhesion. Roll web face with pressure after application. Coating must be applied over WebTape applications.

PRODUCT INFORMATION SHEET

ADVANTAGES

- Use with solvent or water based coatings.
- Sticks to a wide variety of substrates.
- Apply to temperatures below 0°F.
- Available in 4 and 6 inch widths
- Available in off-white.

NOTES

For application questions, please call 763-972-9441. See MSDS for additional product information.

Adhesion	19 lbs/in width
Application Temperature	-20°F to 150°F (air and substrate)
Elongation	>500%
Water Vapour Test (ASTM E-96B)	0.005 g / 100in ² / 24hrs / 100°F
Total Thickness	30 mils
Roll Sizes	4" and 6" by 50ft
